

## Amazing Sea Animals

By Lui Sum Lam, Katie

Blue whales, goblin sharks and killer whales are the animals living in deep sea, open water or coastal water. Goblin sharks and killer whales both eat fishes, but blue whales eat krill.

Blue whales swim faster than goblin sharks. They can swim at about 50km an hour. However, killer whales can swim at about 58km an hour. They are the fastest ones among three of them.

There are some fun facts about these sea animals. Do you know that the tongue of a blue whale is as big as an elephant? The goblin sharks shrink when they get older. Killer whales can live as long as human.

I like goblin sharks because they are cool and unique. I hope people will stop eating shark fins and killing sharks anymore. Therefore, sharks will not be extinct.
