

Issac Newton – A person I admire

By Ng Jan Torsten

Have you ever seen a person stopped going to school and learning by himself? Have you ever met a genius in your life? Have you ever heard of Isaac Newton?

Isaac Newton was born in England in 1643. He was a scientist and mathematician over three hundred years ago. His job was to help humankind find out mysteries of this world and help people.

Isaac Newton was a very smart man. In 1668, he built a working reflecting telescope – three hundred and thirty-four years ago! Although he only went to school for a few years, he laid the foundations for today's science. He was also the first person to describe gravity.

Isaac Newton is regarded by many as the greatest genius who has ever lived. I admire him because he teaches me that everything is possible if you put your mind in it.
